

Hazard Identified and Risk Arising	Persons at Risk	Risk Controls
Moving vehicles: entering or leaving the site; using car park; or (when permitted) travelling to/from other locations on site.	All persons on site - particularly visiting groups.	Although there is a designated car park close to the entrance to the site there may be instances of vehicles using the site's tracks; all Leaders are advised to brief their groups to be aware of such possibilities.
Slips, trips and falls.	All persons on site - particularly visiting groups (especially with younger members).	By the very nature of the site there are areas of steep or rough ground. Leaders are advised to define the boundaries beyond which young people should not venture. In some areas [of the site] there are exposed blocks of limestone which, when wet, can be slippery. Campers are to be advised to take care in such situations.
		Of particular significance is the cliff face forming the western boundary of the site. There is a fence at the top [of the cliff] and Leaders are responsible of advising their groups of the dangers of venturing too far or attempting to climb any of the fences. Towards the northern end of the cliff, by the Camp Fire, there is a steep path; Leaders should set the boundaries in this area.
		The Activity Centre Warden is to ensure that the fence at the top of the cliff is maintained to a satisfactory condition.
Site equipment (tools, grass cutters, gas tank, other plant, etc.	All persons on site - particularly visiting groups.	Any tools, machinery, chemicals or plant considered to be potentially dangerous are to be kept locked away - inaccessible to visitors. The Activity Centre Warden will ensure all items are appropriately stored; no equipment is to be left unattended.
		The Activity Centre Warden is to provide working parties/site volunteers with appropriate training / supervision before using tools / machinery / chemicals, etc.
		Leaders are to remind their groups of the danger of 'investigating' any plant, fittings and fixtures.
Any other items on site.	All persons on site.	Leaders are to brief their groups not to attempt to explore or use other items/fixtures around the site (without appropriate supervision).

Hazard Identified and Risk Arising	Persons at Risk	Risk Controls
Trees.	All persons on site - particularly visiting groups.	The site will be inspected periodically for any dangerous trees by the Activity Centre Warden and expert advice sought, if required; remedial action will be taken as necessary.
		Some areas of the site may not be appropriate for camping in high winds. A dynamic risk assessment must be made and campers moved if necessary.
		Leaders are responsible for briefing their groups and setting boundaries in relation to tree climbing.
Natural environment.	All persons on site - particularly visiting groups.	In addition to the hazards identified above, Leaders should brief their group accordingly in relation to insect stings/bites, nettle stings, toxic plants and the like.
Fire.	All persons on site - particularly visiting groups.	Separate guidance will be provided in relation to the occupation of any permanent building: emergency exits, alarm systems, emergency lighting, kitchen procedures, etc.
		For those groups camping, Leaders are to ensure that best practice is followed and that naked flames are not too close to combustible materials.
Fire risk from smoking.	All persons on site - particularly visiting groups.	Smoking (including the use of e-cigarettes) is not permitted in any building. Designated smoking points will be indicated - well away from buildings.
		For those groups camping Leaders are responsible for setting boundaries.
Proximity to farm machinery, animals, etc.	All persons on site - particularly visiting groups.	Leaders are responsible for briefing their groups (and setting boundaries) when taking-part in activities off-site (and to respect other people's property).
